

The Cypress Wireless Project

We're bringing free WiFi to downtown Salina. **We need your help.**

By allowing us to place small wireless equipment on your building, we can provide public, ad-supported Internet access on and near your property in the downtown area.

This equipment will connect to other wireless devices near your business, extending the range of the wireless network. To reach customers inside your building, we can install a router.

The wireless device uses less power than a common night-light, and in nearly all cases will not require drilling to drop the power cable into your business.

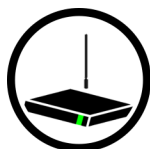

Benefits for your business

Increased downtown traffic

Internet access will increase visitors to downtown Salina.

Internet in your building

We provide viable Internet access for your business.

Build a better reputation

Supporters of CyWi will be prominently featured to users.

What's next?

1

Get in touch with us through **setup@cywi.net** to ask questions or set up a time for installation.

2

A trained installation technician will install our equipment on your building (and set up a router if you requested one).

3

Internet access will be available in mid-July after enough wireless devices are installed and tested.
